EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given by Attorney William L. Androlia on 3/13/2007.

The application has been amended as follows:

Claim 1:

Last line; before ".", add --; whereby said gradation shift between the correct colors is to be repeatedly displayed in therapy--.

Claim 6:

Line 7; replace "the colors" with --said colors--;

Line 9; replace "said color" with --said colors--;

Line 9 (last line); before ".", add --; whereby said gradation color shifts between said colors, having said desired effect, is to be repeatedly displayed in therapy--.

Claim 7:

Line 2; replace "the colors" with --said colors--.

2. The following is an examiner's statement of reasons for allowance:

The invention is directed to a method and apparatus of providing wave-front color therapy using a computer or portable handheld devices such as PDAs to affect a wide

variety of visual, binocular, function, perceptual, and cognitive-related vision imbalances that interfere with function and performance. The current proposed device would provide specific treatment for these difficulties by delivering different wavelengths of light and corresponding color shifts through a display.

Independent claim 1 identifies the uniquely distinct features “whereby in response to said control means a color shift from one preselected color to another preselected color is repeatedly performed while changing said one preselected color and said another preselected color until an optimum color therapy program of the correct colors and gradation shift is determined; whereby said gradation shift between the correct colors is to be repeatedly displayed in therapy.”

Frenkel et al. (US 6,007,569) teaches an electrostressograph system using designated colors and colored light-control sequences inputted via remote control or keyboard. An imagescope console is controlled to display the color changes or sequences. However, Frenkel does not teach the determination and use of particular gradation color shift(s) in color display therapy.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
